DIRECTIONS FOR USE

- 1. Make sure the surfaces to be bonded are clean and dry(preferable to solventwipe plastics glass, and rubber, and to acid-treat metals).
- 2. Dispense a drop or drops to one surface only. Apply only enough to leave a thin film after compression.
- 3. Press parts together and hold firmly for a few seconds. Good contact is essential. An adequate bond develops in less than one minute. (Maximum strength is achieved in 24 to 48 hours).
- 4. Wipe off excess adhesive from the top of the container and recap CHEMSURE CA7 if left uncapped, may deteriorate by contamination from moisture in the air.
- 5. Because **CHEMSURE CA7** polymerises on contact with moisture surfaces, sometimes whitening will occur on the surface of the container or the bonded materials. Should this happen, wipe surfaces well with debonder.
